Functional and Non-Functional Requirements

Functional and Non-Functional.

KPI – Key Performance Indicators

As a business, what will they except to benefit from (your) the system.

And increase in customer usage and rating on trust pilot and other website, they will see increase in sales, sign-ups, bookings and other things. Increase in number of referrals, because it peak.

User Acceptance Criteria – *("user requirements")*

They **do not** have to be lifted out of the user stories. It's helpful to give them a clear numbered list, in an organised numbered list.

Scope of Project (this is very important)

With a scenario, the size of the project is huge, should tell how big it could be, but do make the focus of what you are going to be working on very clearly, just managing the bookings of and thingies, instead of buying and selling of products and all that, it is too big, and so all that will be focused on is just the bookings and registration and things (also note the age you are focusing on).

The Statement of Scope: "Have seen, not touching, just managing the scope of project."
